## Senior tester - (CAS) Collision Avoidance Systems

The divisions Brake systems and Innovation of Knorr Bremse are on a mission to develop a complete automated driving solution for trams in city environment. As the complete development is in Budapest, this challenging task gives you access to every aspect of an ADAS system solution beginning from sensors and image processing up to vehicle dynamics. Knorr-Bremse Rail Systems the leading supplier of railway brake systems is looking for a new colleague to join our quest in the development of a complete collision avoidance system for light rail vehicles.

### Main tasks

- Participate in test strategy definition for an ADAS system
- Creation of test plans for the algorithm develop development, the embedded implementation and for the vehicle tests
- Implementation of test environments
- Creation of test definitions and participation in testing
- Preparing the system for railway homologation

### Requirements

- Bsc/Msc in computer science, electrical engineering or comparable
- Experience in testing of algorithms embedded code
- Willingness to work according to railway standards
- Ability to work independently and cooperate within the team
- Target oriented mindset
- English and German language

### Preferred qualifications

- Experience in transportation industry
- Experience with safety critical systems
- Experience with deep learning and AI verification
- MATLAB/Simulink knowledge

### Details of position
